

ABSTRACT

A mating arrangement for a split slitler, anvil, spacer or any other similar device is disclosed. The mating arrangement provides for precision alignment of the two halves of the split slitler in both the axial and radial directions.

spacer or any other similar device is disclosed. The mating arrangement provides for precision alignment of the two halves of the split slit in both the axial and radial directions.

arrangement provides for precision alignment of the two halves of the split slit in both the axial and radial directions.

halves of the split slit in both the axial and radial directions.
